Cloud Migration

Medical Device Company

The challenge

A startup medical device company was experiencing growth and tasked navitend with helping them decide how to build out their compute capacity to accomodate their recent and anticipated growth.

What we did

navitend identified the required software architecture, data rates, data volumes and growth curve for the business. With these important factors in-hand, we were able to perform a sensitivity analysis of the respective costs of using a top-tier cloud provider (Microsoft Azure) versus purchasing equipment and running it in a data center on owned hardware (colocated servers).

The result

Our client had the information necessary to make an informed decision to purchase equipment and operate in multiple data centers. Despite the common thought that "cloud is always right", this company is poised for smart growth with always-on servers ready to cost effectively handle their anticipated data volumes.

Talk to a person, not a ticket

Tell us what's going on. We'll listen, ask good questions, and give you a straight answer about whether we can help.
