

LOGISTICS & DISTRIBUTION

IoT Solution and M2M Communications

Industrial materials distributor

The challenge

A regional distributor of industrial materials has a challenge -- keep their clients well supplied with product and keep delivery costs to a minimum.

What we did

Our engineering team collaborated with the stakeholders in this project to design an embedded solution which relies on a low-cost computing platform (Raspberry Pi), a cellular modem, and an industrial sensor. All remote units are tracked via a management portal for ease of administration.

The result

Our client is now in a position to optimize deliveries to keep their clients well-stocked with product and minimize costly delivery runs.

Talk to a person, not a ticket

Tell us what's going on. We'll listen, ask good questions, and give you a straight answer about whether we can help.
